Protect your facilities properly: Security doors and manhole covers in focus

Securing plants and infrastructures with high-quality safety solutions is an essential part of an effective safety management system. Protect property and ensure the safety of personnel, thereby increasing operational efficiency.

There are good reasons why you should properly secure your systems and properties with high-quality security doors and manhole covers:

- ▶ **Prevent unauthorised access:** Protect sensitive areas and installations against theft, vandalism and sabotage.
- ▶ **Protect against the effects of weather:** Long-term integrity and functionality of the installations.
- ▶ **Compliance with security standards and regulations**
- ▶ **Ensure operational continuity:** Minimise downtime due to damage, theft or unauthorised access.
- ▶ **Reduce insurance costs:** With tested and certified doors and covers.

i

Meet safety standards with HUBER stainless steel equipment

- ▶ **High-quality stainless steel,** acid-treated and passivated in a pickling bath for maximum corrosion protection results in long-lasting products.
- ▶ **High processing quality** reduces the frequency of maintenance.
- ▶ Products **"Made in Germany"**.
- ▶ **Increased standards through certifications**
- ▶ **Attractive design** adapts to the application and environment.
- ▶ **Flexibility and high product variability** enable diverse and customised manufacturing dimensions.

HUBER Safe Access Solutions offer effective protection for facilities and structures against burglary and criminal activities

HUBER specialises in high-quality stainless steel equipment. Our products are known for their quality, reliability and innovative technology. As a planner and operator, use HUBER products to ensure that your plants and buildings are optimally protected.

HUBER Security Door TT2 – the right protection for your installations

High-quality materials, sophisticated security mechanisms and versatile customisation options offer optimum protection and durability. A first-class choice for demanding security requirements.

HUBER Security Door TT2.1 RC3.

Reliable protection

High resistance to break-in attempts and damage. Prevents unauthorised access and vandalism.

Versatile frame types

Customisable to meet different structural requirements.

Maximum security

Special anchor bolts ensure that the door leaf remains firmly anchored, even if the hinges are tampered with.

Robust and low-maintenance

Long service life with low maintenance, thanks to the high-quality stainless steel material.

Surveillance options

Integration of electronic monitoring systems such as alarm systems and access control possible.

Core pulling protection (with RC4 variant)

Prevents the cylinder from being pulled out and increases protection against drilling and other tampering methods.

Security levels: RC3 and RC4 are tested certifications in accordance with DIN EN 1627, which assess the resistance of components against burglary attempts.

Resistance class RC3 for increased protection against experienced offenders with special tools. Additional protection to standard monitoring systems.

Resistance class RC4 for maximum protection against very experienced offenders with heavy equipment. Recommended for installations without an additional burglar alarm system.
